

HOMEMART

FURNITURE & DECOR — INTERNSHIP PROJECT REPORT

Domain: E-Commerce Web Design

Type: UI/UX & Frontend Development

Status: Completed

PROJECT OVERVIEW

HomeMart is a fully designed e-commerce website for a furniture and home décor brand, developed as part of an internship project. The platform showcases handcrafted, heirloom-grade furniture across categories such as Living Room, Bedroom, Dining & Kitchen, and Office & Decor. The project covers the complete customer journey — from browsing the homepage and viewing product details to adding items to the cart and completing a secure checkout.

OBJECTIVE

To design and build a warm, premium, and user-friendly furniture e-commerce experience that reflects the brand's artisanal identity, while implementing core online-store functionality including product discovery, product detail views, cart management, and a multi-step checkout process.

TECHNOLOGIES USED

HTML5, CSS3, JavaScript | Responsive Web Design | UI/UX Design Principles | Component-Based Layout Design

KEY FEATURES

- ◆ Elegant homepage with hero banner, promotional offer strip, and curated collection highlights.
- ◆ Category-based navigation: Living Room, Bedroom, Dining & Kitchen, Office & Decor.
- ◆ Detailed product modal with pricing, discounts, material specifications, dimensions, warranty, and quantity selector.
- ◆ Multi-step Secure Checkout with Customer Contact and Delivery Address sections.
- ◆ Live Order Summary panel showing subtotal, tax, shipping, and grand total.
- ◆ 'Our Story' brand page highlighting craftsmanship and material sourcing.
- ◆ Wishlist, cart, and account icons integrated into a persistent navigation bar.

DESIGN & E-COMMERCE FUNCTIONALITY

The interface uses a warm brown, cream, and gold colour palette paired with serif headings, giving the site a premium, showroom-like feel consistent with the furniture brand's identity. On the functional side, the store follows a standard e-commerce flow: users explore products through category pages, view rich product details in a modal (including price, discount, ratings, and specifications), and proceed through a structured checkout that captures contact and delivery information before displaying a transparent, itemised order summary.

FUNCTIONAL FEATURES / IMPLEMENTATION

- ◆ Dynamic cart indicator that updates the item count in the navigation bar.
- ◆ Checkout form fields for full name, email, and phone number for delivery scheduling.
- ◆ Address capture fields including street address, city, and state/province.
- ◆ Auto-calculated order summary: subtotal, 8% estimated sales tax, shipping status, and grand total.
- ◆ Discount and offer system: promo code entry (e.g., HOMELOVE15) and free white-glove delivery above a set order value.

RESPONSIVE DESIGN & MOBILE EXPERIENCE

The layout uses flexible, component-based sections — banners, cards, and modals — built to adapt cleanly across screen sizes. Navigation, product cards, and the checkout form reflow to maintain readability and usability on smaller viewports, keeping the premium look consistent across devices.

USER EXPERIENCE

The browsing-to-checkout journey is kept short and intuitive: users can view full product information without leaving the page (via the modal), track their cart at a glance, and complete checkout in clearly numbered steps. Consistent typography, spacing, and the brown-gold-cream theme reinforce a cohesive, trustworthy shopping experience throughout.

TESTING / FINAL OUTCOME

All key pages — Home, Product Detail, Checkout, and Our Story — were reviewed for visual consistency, correct price calculations in the order summary, and smooth navigation between sections. The final build delivers a cohesive, fully functional storefront ready for demonstration.

PROJECT COMPLETION SUMMARY

The HomeMart – Furniture & Decor project successfully delivers a complete, aesthetically polished e-commerce experience, combining thoughtful UI design with practical online-store functionality. It demonstrates a strong understanding of e-commerce workflows, responsive layout design, and brand-consistent visual design.
